

Martin Loiseau

Game Maker

25 - Bac+6 - English C2 (fluent) - Paris

Experience

2022-2024

Game Developer/Designer (Urssaf)

Design and development of *serious games* for the Urssaf network (16 000 employees). Central role in a multifaceted team: development with Unity, game design, prototyping, planning & coordinating, writing, playtesting.

2020-2025

Indie Game Developer

Development of self-published mobile and PC games: *Mask Around*, *Mask Up*, *Plant Down*. Release on Steam, Google Play Store, rouli.itch.io. Direction of musicians. Tools: MonoGame, Unity, C#, Aseprite, FMOD

2022

Java Developer (Sopra Steria)

Development of java backend applications for SNCF (national french railway company). Test automation pipelines using Postman. Integration with the production team & redaction of technical documentation.

2022

Design Factory (Gémo)

Design and prototyping of a physical retail interactive solution dedicated to making the shoe-buying experience engaging for children and parents alike.

2021

DevOps Developer (Groupement U)

Creation of CICD tools and pipelines for big data software Informatica with Jenkins (groovy/python).

Training

2022-2023

Gobelins, l'école de l'image

Specialised Master's Degree Interactive Digital Experiences Designer for video games, culture and communication. Workshops and group projects focusing on game design & development, project management, communication & marketing, monetisation.

Professionnal thesis: *Can we play in bureaucracy?*

End of studies' project: *Loxodon*, a 3D survival FPS game aiming to help the archaeological scientific community.

2017-2022

Polytech Nantes

Computer Science Engineering degree.

Software architecture, design and development, HMI, web technologies, VR, cryptography; test, integration and deployment of software, project management.

Specialized in decision intelligence: advanced analytics and machine learning.

Tools

Software

Development: Unity, Godot, MonoGame, Visual Studio & Visual Studio Code, Rider

Visual: Aseprite, Adobe softwares (Illustrator, Photoshop, InDesign, Premiere)

Audio: Reaper, Audacity

Modeling: Blender

Others: Git, Yarn Spinner, MonoGame, Miro, Figma, Jenkins, Jira, Notion, FMOD

Programming

C#	<div></div>
Java	<div></div>
Python	<div></div>
Groovy	<div></div>
C++	<div></div>
JS/TS	<div></div>
R	<div></div>

Hobbies

Cooking, swimming, philosophy

Mask Around (2023-2024)

[Video](#) - [Google Play Store](#) - [Steam](#) - [itch.io](#)

Mask Around is a 2D shooter platformer roguelike released on Steam and Google Play in 2024. The game is mostly a **solo indie project**, with external help for localization and the soundtrack.

Challenges faced

- Creating a complete moveset with limited input
- Cross-platform oriented design and development, multiple input support (controller, on-screen controls, gyro & mouse support)
- Non-tile-based world generation
- Community management & marketing

*Mask Around's initial concept :
aiming by rotating your phone!*

DSN : Une Aventure Bloquissime (2023)

‘DSN : Une Aventure Bloquissime’ is a *serious game* focusing on a dense administrative process for french businesses called ‘Déclaration Sociale Nominative’. The game was created to acculturate Urssaf employees on this important internal topic.

Roles: Main developer (Unity for WebGL), designer

Challenges faced

- Finding the right balance between fun and learning through game design and writing
- Designing for a wide audience of 16 000+ employees, mostly unfamiliar with gaming.
- Integrating administrative experts in the design process
- Iterating with a multi-faceted internal team with little experience on video-game creation, but a strong expertise in other media and educational projects.

The game adopts the format of a RPG, in which you will assist a character in the (administrative) creation of their bakery.

All That Glitters (2023-2025)

[Steam](#)

All That Glitters is a french visual novel about loneliness, alternative societies and diogenes syndrome. The game originated in a workshop at Gobelins/Enjmin schools during the specialised master's degree 'Interactive Digital Experiences' (IDE).

Roles: Developer, narrative designer

Challenges faced

- Finding the perfect tone between funny, mysterious and coherent
- Incorporating narrative-focused tools such as Yarn Spinner and Text Animator
- Creating a 3D focused workflow fitted for the variety of the team (modeling, texturing, rigging, animating)

All That Glitter's core concept: allowing stationnary exploration by making the world come to the player through intriguing objects floating in a river.

Plant Down (2022)

[Video](#) - [Google Play Store](#) - [itch.io](#)

Plant Down is a mobile 2D boss-rush platformer where you play as a plant in its instinctive quest to take down the monarchy.

Challenges faced

- ‘Tiny design’: making a small game for a small platform (mobile), focusing on quality while working as a **solo developer**.
- Designing and animating 3 bosses with multiple attacks and pattern
- Creating a simple 2D moveset using only two buttons

Straight to the point: Plant Down was the occasion for me to focus on creating something small but unique

Loxodon (2023)

Loxodon is a 3D FPS survival game based on archeological environmental data. The game test scientific hypotheses about prehistorical human behavior by putting players in a sandbox environment and see how they overcome real paleolithic era survival challenges. The prototype, developed during our training at Gobelins' school, aimed at creating an interactive space where unexpected player behavior could happen through emergent gameplay.

Roles: Developer (Unity 3D), designer

Challenges faced

- Working in very fast iterations, bouncing back from development serendipity, test feedback, counselor's guidance and scientists' needs
- Collaborating as a team of 4 with a wide variety of skills

Loxodon benefited from Gobelins' UX lab, allowing us to easily gather player data and feedback
